A certified United States Limited Liability Company

Institutional & Technical Framework

For A New Governmental Organization

Since 2024, The Republic of United Skies serves and pioneers global cooperation among nations and their citizens for the entire humanity through The Constitution of United Skies; the WFN Software & WFN App, the first global flight navigation software, system for flying cars, and integrated mobile booking platform; WFC, the first crypto-blockchain-based payment system for flying cars, VTOL, aviation, space and every flying vehicle; and WFN SOFTWARE LLC.

EXECUTIVE AUTHENTICATION & SYSTEM IDENTIFIERS

Overview: An authoritative registry of unique identification codes for the verification of corporate and legal entities globally. This framework maintains transparency and compliance across all operations. Contained herein is the verified Employer Identification Number (EIN), the primary tax and regulatory identifier confirming the LLC's active status and operational legitimacy within the United States.

- FEDERAL IDENTIFIER: EIN [38-4380457]
- STATUS: VERIFIED / ACTIVE
- DOCUMENT ID: B01M – FILED IN THE WFN ARCHIVE.

INSTITUTIONAL COMMUNICATIONS DIRECTORY

Overview: The only official, verified, and secure contact for the Department of Foreign Affairs of the Republic of the United Skies: foreignaffairs@republicoftheunitedskies.org

ASSETS & DOMAIN DIRECTORY

Overview: The verified digital gateways are providing secure access to the organization's public records, governance protocols, and global digital infrastructure. These platforms serve as the primary authoritative source for all institutional information and stakeholder engagement.

OFFICIAL GOVERNMENT PORTAL: WWW.REPUBLICOFUNITEDSKIES.ORG

OFFICIAL GITHUB: <https://github.com/RepublicOfUnitedSkies/>

INTERNET ARCHIVE: [Republic-Of-United-Skies---Online-Archive](#)

TECHNICAL GLOSSARY

Overview: The standardized framework for the classification and definition of specialized terminology, protocols, and technological architectures. This index serves as the authoritative reference for ensuring linguistic precision and structural alignment across global technical operations, facilitating seamless interoperability between complex systems and software environments.

Republic of the United Skies: The Republic of the United Skies is an international republican institutional framework created to organize, coordinate, regulate, and promote the future of Global Advanced Air Mobility (AAM) through cooperation between sovereign nations, international institutions, industry, researchers, businesses, and citizens.

The Constitution of the United Skies: The Constitution of the United Skies is the supreme law of the Republic of the United Skies. It is the constitutional charter that establishes the Republic's institutional identity, fundamental principles, governmental structure, separation of powers, rights, responsibilities, and long-term vision for Global Advanced Air Mobility (GAAM).

COUNTER INTELLIGENCE SERVICE: The sovereign authority engineered to neutralize every internal or external threat to the Republic of United Skies. In our sky, we enforce absolute security.

ISGO: International Semi-Governmental Organization

WFN Technologies: WFN Technologies are the technical and scientific disciplines that study the application and use of everything that can be functional to the solution of practical problems, the optimization of procedures, and the selection of operational strategies to achieve a specific objective within the global flying car sector, filling the lack of physical coordination of the traditional ecosystem.

WFN Software: WFN Software (World Flight Navigation Software) is the world's first flight navigation software specifically engineered for flying cars. Developed by WFN Software LLC, it serves as the intelligent navigation and coordination platform responsible for managing the future movement of flying cars, Global Advanced Air Mobility (GAAM), VTOL aircraft, intelligent drones, conventional aviation, airports, cargo operations, and future aerospace vehicles through a unified global infrastructure.

WFN App: The WFN App is the official digital gateway to the WFN ecosystem and the Republic of the United Skies. Designed for passengers, pilots, operators, businesses, institutions, and public authorities, it provides secure access to every major service offered by the ecosystem through a single mobile platform. Through the application, users can communicate with the HANNA sovereign AI infrastructure, request an iFLY craft (flying car), monitor flights in real time, manage digital identities via facial recognition and secure document upload, complete World Fly Coin (WFC) payments, and interact with the Republic's digital services.

WFC (World Fly Coin):

World Fly Coin (WFC) is the official digital currency of the Republic of the United Skies and the native financial infrastructure of the WFN ecosystem. It is the world's first crypto-blockchain-based payment system specifically engineered for flying cars, advanced aviation, intelligent drones, Urban Air Mobility (UAM), aerospace logistics, and future space transportation. Built on its own sovereign blockchain, World Fly Coin introduces the Proof of Flight (PoF) consensus mechanism, replacing traditional energy-intensive mining with blockchain validation based on verified real-world flight activity generated within the WFN ecosystem. Integrated directly into the WFN App, WFC enables instant payments for aircraft reservations, cargo logistics, airport services, memberships, humanitarian missions, aerospace operations, and future space transportation through biometric authentication, NFC technology, QR Codes, encrypted digital wallets, and secure cryptographic protocols. As the official monetary infrastructure of the Republic of the United Skies, WFC is designed to function as the ecosystem's digital financial authority, supporting a unified economy for advanced air mobility while eliminating the fragmentation of traditional payment systems based on banks, cards, currency conversions, and multiple intermediaries.

PoF: A consensus mechanism that leverages real-world flight data to validate network transactions within the WFC ecosystem.

GAAM: Global Advanced Air Mobility.

iFLY: Prior to being a machine, the iFLY is a digital ecosystem. The WFN Software is the pillar upon which the entire experience rests: a Semi-Autonomous AI Craft that transforms a complex aerospace asset into a natural extension of human intent. "It is more than just a flying Craft, it is an extension of the mind and spirit. Live the true feeling of being free. Own the sky with the iFLY Craft: a breakthrough in personal mobility, combining cutting-edge aerospace technology with semi-AI."

iFLY NOW: The iFLY craft is valued at hundreds of thousands of dollars. While regular users utilize the standard smartphone app to pay a fixed trip fee for a passive commute, acquiring this advanced portable flight controller grants direct authority and elite access to pilot the multi-million dollar fleet. It allows operators who do not possess millions of dollars to rent, unlock, and personally guide an iFLY aircraft through the skies by paying the corresponding vehicle rental fees. iFLY NOW makes this elite access possible for many more people.

iFLY METRO: A New Global Public Aerial Transport System for Making the Sky a True Subway for Everyone – A Game-Changer for Aerial Mobility. With a capacity of up to 850–1,150 passengers per route, it features smart, structured, and diversified routes through an extensive network/line with multiple accessible hubs in every city.

WFR: World Fly Race. We launched this revolutionary aerial sport in 2024, complete with the World Fly Race Academy and intelligent flying vehicles (iFLY). We pioneered the vision, values, and innovation, setting the standard for aerial racing worldwide.

WFW: One sky. One community. WORLD FLY WEB is the digital platform that connects all lovers of flight and travel: pilots, passengers, investors, professionals, and aerial visionaries

ETA: Estimated Time Of Arrival.

ATC: Air Traffic Control.

E2EE: End-to-End Encryption.

NAVIGATION INDEX OF THE PROPOSED TECHNICAL FRAMEWORK

Overview / Author's Institutional Notice: The centralized architectural framework designed to facilitate the rapid location and retrieval of technical data, strategic protocols, and institutional sections within this document. This index ensures structural coherence and seamless accessibility for all stakeholders. This framework represents a locked structural thesis developed independently through intense, concurrent phases of academic study, employment, and technical execution. Because the blueprint has been advanced under severe operational velocity and resource constraints to maintain real-world baseline continuity, the reader is notified that certain historic micro-discrepancies, typographical variances, or minor pagination offsets may exist within individual draft segments. The author extends formal apologies for any such technical misalignments, which do not alter the integrity of the core macroeconomic sovereign currency or sovereign airspace governance architecture.

REPUBLIC OF UNITED SKIES

SECTION 0.9 GENESIS

An Achievable Dream

Born on August 21, 2001, my path was clear by the age of eleven. Watching the final Space Shuttle launches and witnessing the rise of SpaceX's ability to inspire future generations, I knew my life's mission: I would found my own space agency. At that point in my life, teachers told me I had less than a "0.0005% chance" of success, that it was foolish, and that no such career path even existed. They pointed me to the standard academic paths—Music High School for musicians, Sports High School for athletes—but for those aspiring to be astronauts or aerospace engineers, there was only a generic scientific path. While specialized degrees exist later at the university level, from the age of 13 to 17, I constantly searched, but there was absolutely nothing available in my country. This educational gap is why our community remains a niche while football has 5 billion fans; we extinguish the dream before it can even breathe. Starting an aerospace agency from zero is a near-impossible endeavor. The certification costs alone for a single launch can exceed \$100 million. The technical barriers are monumental; one only needs to look at SpaceX to see the years of development and the massive public-private support required. Faced with this void, I made the only tactical choice possible: Computer Science. Even though it wasn't a specific aerospace track, it was the closest thing to it, and I chose it carefully. It wasn't a standard "IT" choice; it was the realization that future aerospace engineering is not just made of metal, but of logic and code. Books were not enough, and capital was non-existent—a reality check that hit me every second, keeping my feet firmly on the ground. Knowing that my destiny would otherwise be a factory floor or a stagnant desk job, I decided to change my strategy.

Bootstrapping and Obsession

With zero funding, in 2022 I did the only thing possible: I founded a real estate agency with a big friend, focusing on high-value assets across Italy, Spain, and the UAE. In just one year, I built a portfolio of +75 exclusive properties, ranging from a €30 million building on Paseo de Gracia to €300 million hotel in Dubai owned by Royal Families. I pursued these assets for three reasons: to gain experience, to support my family, and because a 1-3% commission would be my "Willy Wonka Golden Ticket" to fund my aerospace agency. Despite promising contacts, I didn't close a single sale; income came solely from rental commissions of €2,000 to €4,000. We were light-years from the goal. Then came the most significant family loss of my life. In that grief, I realized that if I was going to work that hard, it had to be for what I truly loved. I left everything with €500 in my account and rent to pay. For over a year, I lived in a state of pure obsession: working full time 8 to 11 hours daily balanced only by WFN, training and a quick meal. Between 2024 and 2026, this obsession translated into an independent personal investment of approximately €/\$ 30,000–37,000 and over 28,000 hours of direct, unyielding labor—operating on standard 8-hour days that frequently extended into grueling 15-to-20-hour non-stop development sessions. I spent nearly a decade navigating failures and intensive analysis of a world then considered "Hollywood science fiction": flying cars. By 2024, we were exactly where the Internet was in the early '90s: An idea too complex for most, yet inevitable. I identified that the dogma "flying cars don't work" is actually a systemic architectural error. The problem isn't flight; it's the management of chaos. Without a global communication protocol, every vehicle is just a piece of metal destined to stay on the ground. After a decade of analysis, intuition became a system—a code. I set out to create the first Global Flight Navigation Software For Flying Cars, aviation, and every aerial vehicle, alongside the world's first crypto-blockchain-based payment system specifically engineered for flying cars, advanced aviation, intelligent drones, Urban Air Mobility (UAM), aerospace logistics, and future space transportation.. At that exact moment, I opened my computer and began writing the first lines of code for the WFN Software. I realized then that WFN wouldn't be just a regular software. The entire ecosystem became clear in a millisecond, as if I could already see it functioning. Seeking technical validation for my self-taught research, I reached out to a prominent professor of aerospace software engineering at MIT. I had already independently selected the core advanced textbooks; I was simply looking for an academic peer review on the architectural logic of my invention. I expected the raw, open-minded execution ethos of Silicon Valley—a mindset capable of managing infinite data streams and identifying disruptive potential, regardless of labels. Her response, however, was a gatekeeping dismissal wrapped in the excuse of having "no time." Perhaps she was genuinely overwhelmed, but the reality remained identical: because I wasn't an enrolled student paying tuition within their institutional walls, she wouldn't even validate my textbook selection. I hadn't knocked on the door of a music department; I was presenting an advanced aerospace protocol, but the elite academic machine chose to protect its caste rather than evaluate the logic of the code. Once again, I was left to figure it out ENTIRELY ON MY OWN. BUT LOOK AT US RIGHT NOW !!! in August 2026—the reality is completely different. The pace of WFN's growth has been absolutely brutal; in just three years, the project forced its way from v0.1 to v0.4. That last jump from 0.3 to 0.4 took a mere four months, changing everything. For me, carrying this entire weight completely alone, it was a crushing, nearly impossible burden, and it still is. Yet, the foundation is finally solid. The chaotic tsunami has calmed down, and our direction is now hyper-clear. This path is set in stone and will never change, even though we will naturally continue to evolve forever.

Hard Work Taking Shape

The Republic of the United Skies is an international republican institutional framework created to organize, coordinate, regulate, and promote the future of Global Advanced Air Mobility (GAAM) through cooperation between sovereign nations, international institutions, industry, researchers, businesses, and citizens. Unlike a traditional republic founded upon a defined geographical territory, the Republic of the United Skies is the first designed around the concept of the sky as a shared institutional domain. It provides a constitutional and technological framework dedicated to the governance of future air mobility, aerospace innovation, and international cooperation. Its creation is the result of more than a decade of research, technological development, institutional design, and long-term strategic planning.

The vision originated in 2013, when its founder pursued the ambition of contributing to the aerospace sector. Over the following years, the project evolved through independent research, continuous study, software development, and professional experience across multiple industries. These experiences provided both the technical expertise and the financial resources necessary to pursue the long-term objective of building a global ecosystem dedicated to advanced air mobility.

During 2024, the vision matured into a comprehensive institutional and technological project. The first Business Plans, institutional Pitch Decks, and strategic studies were completed. At the same time, development began on the first lines of code for the WFN Software and the WFC Payment System, establishing the technological foundations of the ecosystem. On January 5, 2026, at 11:07 AM (Mountain Time), WFN Software LLC was officially incorporated in the State of Wyoming, United States, and registered by the Wyoming Secretary of State. The company became the legal entity responsible for developing the software, digital infrastructure, and institutional ecosystem supporting the project.

As the project expanded beyond technology, it became evident that future global air mobility would also require an international institutional structure capable of promoting cooperation between nations. At that stage, the final constitutional model had not yet been determined. To address this need, WFN Software LLC announced its intention to operate through an International Semi-Governmental Organization (ISGO). The ISGO represented the project's first international institutional framework and served as the transitional phase through which its governance model could be developed and refined. During this institutional evolution, it became clear that a traditional international semi-organization alone would not fully satisfy the long-term objectives of the project. Following extensive legal, constitutional, and institutional analysis, the republican model was identified as the most appropriate form of governance. This transition was formalized through a series of institutional milestones.

On February 13, 2026, the first version of The Constitution of the United Skies was drafted. This initial constitutional document established the project's fundamental principles and represented the first constitutional foundation of the future institutional framework.

On April 11, 2026, the Technical Framework – Document B01M was officially published. The document defined the technological architecture, governance principles, operational philosophy, and institutional vision of the ecosystem while formally presenting the ISGO structure.

On April 12, 2026, the Declaration of Intent was published, officially expressing the intention to establish an international institutional system dedicated to Global Advanced Air Mobility through international cooperation, technological innovation, and peaceful development.

Following the completion of this institutional process, The Constitution of the United Skies was further developed and refined into its definitive constitutional framework. With its adoption, the transitional role of the ISGO reached its purpose, and the Republic of the United Skies emerged as the project's permanent constitutional and institutional model. The Republic is therefore not the result of replacing one organization with another, but the culmination of a structured institutional evolution that progressed from a private legal entity, through an international semi governmental organization framework, to a constitutional republican system. Like every republic, the Republic of the United Skies is built upon the fundamental elements of statehood, adapted to the realities of twenty-first-century technology and international cooperation. Within this institutional model:

- * The skies constitute the institutional territory, encompassing advanced airspace and, in the long term, aerospace infrastructures and future space mobility.
- * Participating nations become the Member States of the Republic while fully preserving their national sovereignty.
- * The citizens of participating nations, together with travelers, pilots, operators, researchers, businesses, institutions, and authorized users, form the community served by the Republic.
- * The Constitution of the United Skies serves as the supreme constitutional foundation of the institutional system.
- * WFN Software provides the technological infrastructure responsible for coordinating advanced air mobility.
- * World Fly Coin (WFC) serves as the digital payment infrastructure supporting services across the ecosystem.
- * HANNA Semi-AI operates as the Republic's intelligent institutional assistant, providing coordination, operational support, and information services.

The Republic is guided by its institutional mission: "Serving Nations, citizens & Humanity to Pioneer Global Advanced Air Mobility through the WFN Software, the WFC Payment System, and the Constitution of the United Skies, enabling the future of flying cars, aviation, unmanned aerial systems, and space mobility."

Its objective is to promote the safe, coordinated, and sustainable development of advanced air mobility, including flying cars, VTOL aircraft, intelligent drones, conventional aviation, aerospace infrastructure, and future space transportation. The Republic also promotes international cooperation in aviation safety, scientific research, healthcare logistics, civil protection, environmental sustainability, technological innovation, digital infrastructure, education, and economic development.

Its constitutional architecture provides for governmental institutions, administrative authorities, technical agencies, judicial bodies, public security services, specialized law enforcement organizations, and, where established through future international agreements, operational structures dedicated to protecting advanced air mobility infrastructure. Every participating State retains full sovereignty while voluntarily contributing expertise, personnel, infrastructure, and resources in accordance with the Constitution.

The Republic of the United Skies already exists as an institutional and constitutional framework defined by its founding documents. Its future recognition, ratification, and implementation by sovereign States, institutions, and international organizations will not create the Republic itself; rather, such acts will represent its formal international recognition and the beginning of the cooperative constitutional system envisioned by its founders.

SECTION 1

SIGNIFICANT GLOBAL DEFICIENCIES IN GAAM
STANDARDS AND THE FLYING CAR INDUSTRY

The current aviation industry is building a future on shifting sands. Manufacturers worldwide are racing to capture market share with isolated hardware—short-range prototypes with questionable safety and zero coordination. This is total chaos. They are producing VTOLS without having engineered the central coordination framework required to operate them. When profit-driven haste supersedes industrial responsibility, systemic failure is the only outcome. The question the industry refuses to address is: "Who will manage the airspace when thousands of vehicles launch simultaneously over New York, Seoul, or Rome?" Without a global standard and central coordination, the rise of Urban Air Mobility (UAM) will lead only to regulatory paralysis and catastrophic collisions.

The Republic of the United Skies was born to fill this vacuum as the supreme sovereign and regulating authority, defining the constitutional Rules of Engagement for the global sky. Within this architecture, WFN Software LLC operates as the core technological engine, holding the proprietary research, infrastructure development, and software solutions. While the Republic governs the ecosystem, WFN Software LLC remains the scalable corporate asset designed for global market dominance—the specific legal entity structured to leverage this technology and target a future public listing on the NASDAQ.

Traditional Air Traffic Control (ATC) has become the primary bottleneck for aviation scalability. The current infrastructure relies on legacy, manual frameworks that are dangerously prone to human fatigue—a leading driver of global flight delays and cancellations, alongside the fact that roughly 26% of all structural disruptions are now tied to critical maintenance and supply chain delays. The historic 35-day U.S. government shutdown, which forced 14,000 controllers to work unpaid, exposed the extreme vulnerability of this human-dependent chain. Furthermore, 44% of aviation operations explicitly report that a severe shortage of certified maintenance technicians is their number-one operational bottleneck. While airports remain essential logistical hubs, the traditional airplane is becoming obsolete technology.

Under the sovereign governance of the Republic and through WFN technology, all of this will find a definitive resolution.

STRATEGIC SECTORS AND HUMANITARIAN RESILIENCE

Sources: Copas-Sarsat (2023), US Lost Person SAR Data, Missing Migrants Project.
Estimates refined by WFN Research - Global Remote Rescue Analysis.

The WFN infrastructure extends far beyond civilian transportation; it serves as the foundational backbone for critical sectors of human development and international security under the sovereign governance of the Republic of the United Skies. Institutional and Diplomatic Missions are structured across three primary pillars:

1. **Healthcare Logistics and Crisis Response**Emergency Medical Logistics: Deployment of autonomous iFLY vehicles and drone fleets for priority medical transport, including human organs, critical blood supplies, and emergency medical equipment. Time-Critical Countermeasures: High-velocity distribution of antivenoms, vaccines, and medicinal serums. The fleet directly prevents fatalities in acute envenomation (snakebite) cases where delayed delivery is currently fatal, while systematically combatting endemic pathogens like malaria across geographically isolated communities. Educational Supply Chains: Dedicated logistical frameworks targeting crisis zones and underdeveloped regions. The fleet ensures global educational continuity through the automated delivery of advanced technological and educational materials to neglected backyards worldwide.

2. **Food Sustainability and Resource Management**Farm-to-Consumer Optimization: Automated distribution networks for agricultural and perishable food products (meat, fish, and dairy). The architecture completely bypasses legacy logistical intermediaries, drastically lowering supply chain costs and enabling real-time routing from producer to final consumer. Precision Agriculture: Integration of orbital satellite monitoring and supportive drone operations to optimize seeding and harvesting phases, maximizing crop yields while significantly reducing natural resource waste.

3. **Urban Ecology and Space Infrastructure**Metropolitan Waste Mitigation: Targeted atmospheric and surface intervention in high-pollution mega-cities (e.g., New Delhi). The autonomous fleet actively coordinates the monitoring and high-volume clearance of toxic dumpsites, overflowing landfills, and hazardous urban scrapyards to safeguard public health. Orbital Infrastructure Maintenance: Specialized support, refueling, and maintenance operations for orbital assets, ensuring the long-term sustainability of global communication constellations and deep-space operations. 360° Tracking and Booster Recovery: An advanced, high-security recovery system for rocket boosters and space assets. This closed-loop reuse architecture drastically minimizes environmental impact and reduces launch overhead costs.

WFN IMPACT: REDEFINING GLOBAL INFRASTRUCTUREThe Republic of the United Skies stands at the forefront of global structural innovation, leveraging WFN technology to merge advanced software ecosystems with scalable iFLY and drone fleets, systematically redefining both terrestrial and space-based infrastructure. Operating under a continuous 24/7 autonomous framework, this institutional mission transcends simple logistics; it is actively architected to eliminate child malnutrition by optimizing global food production and streamlining humanitarian supply chains. In an era where geographic isolation in extreme environments results in systemic loss of life, the Republic bridges the gap between "located" and "reachable." The specialized Red Angel fleet—engineered with precision vertical takeoff and landing (VTOL) capabilities and unmatched maneuverability—ensures that life-saving aid is never obstructed by hostile terrain. Predictive statistical modeling demonstrates a drastic reduction in regional mortality rates through this automated intervention, particularly in mitigating acute public health crises. Furthermore, while traditional high-density transit frameworks—such as subterranean subway systems—accelerate viral transmission through poor air quality and overcrowding, the Republic introduces a definitive paradigm shift in biosafety. Through the iFLY ecosystem, individual and public health are prioritized by providing a sanitary, decoupled alternative to legacy travel. By strategically capitalizing on the economic efficiencies of TrumpRx interventions—which significantly lower baseline drug costs by 80%—WFN's AI-driven autonomous systems preserve and amplify these healthcare savings by an additional 9%. This integration unlocks hundreds of billions in dormant capital while ensuring that global medical delivery networks operate faster, safer, and with unprecedented efficiency. This framework does not merely transport cargo; it secures the future of global health and macroeconomic stability.

HEALTH RISKS OF LONG-HAUL SEDENTARY TRAVEL

Cardiovascular disease **[Fig. 1.3]**

Type 2 diabetes & metabolic syndrome

Certain cancers (colon, endometrium, lung)

Early mortality

Musculoskeletal strain (back, neck, legs)

The strategic AAM/UAM choices implemented today will define the infrastructure of future generations, where the Republic of the United Skies is committed to a legacy of health and sustainability. Conventional long-haul travel forces passengers into over nine hours of harmful sedentary immobility, a state that triggers severe risks such as cardiovascular disease and musculoskeletal strain, as shown in [Fig. 1.3]. While high-density seating [Fig. 1.4] facilitates viral exposure and physiological stress, ÌFLY drastically cuts transit times, transforming speed into health gained.

[Fig. 1.4]

Onboard every vehicle governed by the Republic, safety is a non-negotiable standard: every ride is fully equipped for medical emergencies, from defibrillators and diabetic management supplies to transfusion capabilities. This commitment to well-being is paired with menus designed by starred chefs and a dedication to family care, offering expectant mothers a 50% discount via WorldFlyCoin, alongside free travel for children under the age of eight. Through the adoption of WFN technology, we don't just move people; the Republic of the United Skies protects the future by taking unparalleled care of our passengers' health.

WFN ECOSYSTEM: CORE TECHNOLOGIES & SOLUTIONS

WFN Technologies comprise the technical and scientific disciplines engineered to study, develop, and deploy operational strategies within the global Advanced Air Mobility (AAM) sector. This architecture fills the critical coordination void plaguing the traditional aerospace ecosystem; a technology is fundamentally engineered to eliminate systemic chaos. Under the sovereign authority of the Republic of the United Skies, these technologies are deployed and enforced across two primary pillars:

- 1. The WFN Software & App Ecosystem** The WFN Software & App Ecosystem stands as the world's first global flight navigation software and mobile application network engineered for the booking, navigation, and automated coordination of flying cars, eVTOLs, and all airborne vehicles. This ecosystem directly addresses the anarchic state of the modern aerospace market, where manufacturers race to create isolated hardware without central coordination frameworks. By replacing legacy, human-dependent air traffic control with absolute software execution, the system integrates thousands of airborne vehicles into a single, automated, and secure hive-network under the regulatory oversight of the Republic—allowing citizens to seamlessly book and navigate flights directly from their smartphones. Beyond base coordination, the tracking architecture integrates an advanced monitoring system for semi-autonomous urban vehicles and autonomous drones through mandatory Digital Identification (Digital License Plates). Enforced by institutional mandates, these digital plates serve as immutable identifiers for each vehicle, enabling flawless tracking and real-time management. To guarantee absolute safety, the Republic utilizes intelligent velocity monitoring via Digital Speed Cameras that track vehicle speed and vectors in real time. Any violations, such as speeding or unauthorized routing, trigger instantaneous, automated penalties and fines. Through embedded sensors, multi-spectrum cameras, and advanced AI, the iFLY Craft continuously scans the environment for conventional aviation, radio masts, avian flocks, and other aerial obstacles, delivering the definitive solution for semi-autonomous flight in a secure, regulated sky.
- 2. WFC Technology** WFC (WorldFlyCoin) represents the framework of monetary sciences developed to manage and structure an aerospace economy directly within the sky. An economic technology is fundamentally created to resolve the systemic inefficiencies and transactional vulnerabilities of a global infrastructure. The system resolves a critical structural bottleneck: traditional fiat currencies and legacy banking networks are too slow and fragmented to support the instantaneous micro-payments, autonomous refueling, and automated logistics required in real time by an active global air fleet. WFC Technology stands as the official monetary infrastructure of the Republic of the United Skies, serving as the world's first crypto-blockchain payment system powered by a Proof-of-Flight (PoF) consensus mechanism, engineered specifically for flying cars, advanced aviation, and aerospace logistics. Confidentiality Notice & Disclaimer This structural representation serves a purely visual and conceptual purpose for the scope of this document. Geodynamic data streams, orbital constellation specifications, and cryptographic communication protocols remain strictly confidential and protected under industrial trade secret laws. The analytical inclusion of every individual coordination data point would expand this documentation from 32 pages to over +10,000 pages in total volume.

WFN APP

The WFN App is the official digital gateway to the WFN ecosystem and the Republic of the United Skies. Designed for passengers, pilots, operators, businesses, institutions, and public authorities, it provides secure access to every major service offered by the ecosystem through a single mobile platform. Through the application, users can communicate with HANNA sovereign semi-AI infrastructure, request IFLY Craft (flying car), monitor flights in real time, manage digital identities via facial recognition and secure document upload, complete World Fly Coin (WFC) payments, and interact with the Republic's digital services. The platform also integrates a Global SOS Emergency Protocol, enabling the immediate deployment and coordination of air ambulances and law enforcement aerial vehicles during critical incidents. The application also manages the complete Proof of Flight (PoF) operational sequence, allowing users to locate the nearest available vehicle, calculate routes, authorize payments, receive ETA estimate time arrival, and monitor every mission until completion. For cargo operations, the WFN App introduces a protected delivery architecture that differs significantly from conventional drone delivery systems. Rather than suspending packages beneath the aircraft or releasing cargo from altitude, WFN drones transport payloads inside the fuselage through an Internal-Load Architecture protected by an automated rear cargo compartment. This system provides: Total Protection: absolute isolation against weather conditions, impacts, and unauthorized access. Aerodynamic Stability: maintenance of an optimized center of gravity throughout the entire flight. Digital Security: verification through encrypted QR codes and unique identification numbers generated only after WFC transaction confirmation, ensuring that only the authorized recipient can unlock the cargo compartment. The WFN App combines navigation, logistics, payments, security, communication, and intelligent assistance into a single digital platform designed to simplify every aspect of global advanced air mobility. the WFN ecosystem coordination is partially managed by Hanna, the Official WFN Flight Assistant.

Hanna is engineered to provide comprehensive expert guidance across all operational sectors, including pre-flight preparation, takeoff, and landing procedures. Furthermore, she serves as the primary technical authority for financial operations, technological infrastructure, and the global legal framework established by The Constitution Of The United Skies. The infrastructure is designed for command centralization via mobile terminals, placing total control of the global air carrier reservation network directly in the operator's hands.

Phase 3 (Logistics Input): Destination entry (Example: JFK Airport). Instant calculation of the optimal route and determination of operational costs in WorldFlyCoin (WFC).

Phase 4 (WFC Settlement): Finalization of the transaction according to parameters established by the PoF via secure cryptographic protocol. Financial control is managed directly from the handheld terminal's digital wallet.

Phase 5 (Validation and ETA): The system confirms the operation and displays the Estimated Time of Arrival. The PoF protocol concludes with the physical pick-up at the user's geolocated position.

The activation of the iFLY transport module follows the PoF (Proof of Flight), a standardized operational sequence for mobile devices that ensure deployment efficiency across 6 phases:

Phase 0 (Initialization): Access to the Hanna terminal via mobile device. Selection of the iFLY Craft booking function from the command menu.

Phase 1 (Network Scan): The system executes immediate geospatial triangulation. The power of the WFN network is channeled to the terminal to identify the available asset closest to the user's coordinates.

Phase 2 (Asset Synchronization): Display of positioning data on the mobile mapping interface. Real-time monitoring of the assigned vehicle via satellite uplink.

WFN DRONE LOGISTICS PLATFORM & MINI-CARGO INFRASTRUCTURE

Under the sovereign authority and regulatory oversight of the Republic of the United Skies, the drone logistics platform provides a decentralized, secure, and highly efficient network for public and commercial utility. Integrated directly within the official WFN App, the infrastructure enables users to seamlessly book, authorize, and track autonomous merchandise deliveries from global e-commerce platforms and retail giants, distributed directly via advanced airborne drone fleets. In contrast to legacy delivery systems based on suspended loads or gravity-drop deployment—methods that expose the cargo to oscillations and structural damage—the fleet utilizes a protected-hold design managed through strict institutional standards. The cargo drone is equipped with an automated rear door that houses the payload internally within the aerodynamic fuselage. This "Internal-Load" architecture guarantees:

Total Protection: The payload is fully shielded from atmospheric agents and external tampering during transit.

Aerodynamic Stability: The elimination of tethered loads stabilizes the center of gravity, allowing the autonomous fleet to maintain a constant flight attitude even in high-wind conditions.

Digital Security: As indicated in the navigation interface], the compartment unlocks exclusively via a unique cryptographic identifier generated upon transaction completion. WFN software secures both capital and cargo until effective delivery; funds are not actually deducted from the user's encrypted digital wallet until the protocol is successfully concluded.

The Republic utilizes this advanced technical framework to act as the transaction guarantor for all automated logistics. By utilizing direct aerial routes, vehicles bypass urban traffic, reducing standard delivery times by up to 80%. High-altitude flight eliminates the risk of ground-level theft, rendering the cargo physically inaccessible to third parties throughout the software-managed transit. Upon arrival of the drone cargo unit, the citizen simply brings their smartphone close to execute proximity authentication; this automatically unlocks the rear hull, allowing the safe retrieval of the package and completing the instant World Fly Coin (WFC) payment settlement for the micro-orders.

iFLY BUSINESS & ELITE COMFORT

Whether traveling for business, daily commutes, or leisure, your flight is completely taken care of. Once onboard, your only task is to relax, work, or enjoy the sky in absolute VIP security.

Prior to being a machine, the iFLY is a digital ecosystem. The WFN Software is the pillar upon which the entire experience rests: a Semi-Autonomous AI interface that transforms a complex aerospace asset into a natural extension of human intent. "It is more than just a flying Craft, it is an extension of the mind and spirit. Live the true feeling of being free. Own the sky with the iFLY Craft: a breakthrough in personal mobility, combining cutting-edge aerospace technology with AI." Through deep integration with Hanna AI, the software interprets operational requirements, optimizing both trajectory and stability. The Semi-Autonomous system manages flight complexity (attitude maintenance, swarm management, obstacle avoidance), leaving only strategic command decisions to the operator via the iFLY NOW Terminal. Command Interface (Smartphone vs. Tablet): The WFN ecosystem is accessible from any mobile device; however, the iFLY NOW Tablet remains the mandatory command center for orchestrating the asset with millimeter precision. The expanded dashboard enables functions that radically transform the flight experience: Eco-Sustainability & Performance: A primary focus is dedicated to Eco Mode, which optimizes electric vectored propulsion for maximum energy conservation and minimal acoustic impact, ensuring sustainable flight without compromising velocity. For varying requirements, the user can instantaneously toggle between Sport or Race modes. Executive Comfort and Connectivity: The tablet manages the internal environment via Relax and Lights commands, creating the ideal atmosphere for operational continuity, supported by an integrated high-speed Wi-Fi network to remain constantly connected to global markets. Safety and Tactical Navigation: Professional management of Radar and Radio systems for formation flight, supported by an automated Check-list that verifies over 1,000 components prior to every takeoff. Immediate Control: At any moment, the operator can activate the Landing Now command, initiating a semi-autonomous assisted descent procedure toward the nearest landing pad, ensuring unprecedented safety even during abrupt course changes. Vital Systems and Maintenance: Constant monitoring of Engine Status (100%), Clear/Clean Engine functions, and cabin management (Check Pressure & Oxygen, Windshield Cleaning). Active Safety Protocols: Instant activation of Anti-Collision, Anti-Fire, Anti-Ice, and Anti-Lightning systems, alongside the absolute-priority Emergency SOS button. Tactical Attitude and Performance: Selection of flight modes (Sport, Race, Eco) and management of advanced modules such as Night Vision and Stealth Mode for silent operations. Hanna AI Assisted Navigation: Direct interface with the flight assistant and Co-Pilot, radar/radio management, and destination selection from the global 3D map. Real-Time Operational Commands: Physical management of Doors, landing gear (Gear Up/Down), and the critical Take Off and Landing Now phases. Vanguard Aerospace Engineering: The ultralight composite monocoque fuselage and electric vectored propulsion is governed with millimeter precision by the software to allow m access to urban spaces. The software constantly analyzes the "myriad of critical components" of the craft, ensuring safety and acoustic stealth during every flight phase, both day and night. Executive Standards and Mobile Office: The pressurized cabin is engineered for operational continuity. The software transforms transit into productive time: while the AI manages flight in semi-autonomous mode, the user is free to dedicate 100% of their attention to their life, interests, and business".

The first sovereign, crypto-blockchain-based electronic payment system for flying cars, VTOLs, aviation, space, and all airborne vehicles. Conceived and developed in 2024.

World Fly Coin (WFC) is the official digital currency of the Republic of the United Skies and the native financial infrastructure of the WFN ecosystem, conceived and created in December 2024. It is the world's first crypto-blockchain-based payment system specifically engineered for flying cars, advanced aviation, intelligent drones, Urban Air Mobility (UAM), aerospace logistics, and future space transportation. Built on its own sovereign crypto-blockchain, World Fly Coin introduces the Proof of Flight (PoF) architecture. As a cryptographic verification system, PoF utilizes telemetry, trajectory, and operational data from real-world flights to validate network transactions and secure the ledger through distributed nodes. While the broader infrastructure integrates a vast suite of advanced protocols—including BLS signatures and multi-layered consensus mechanisms detailed in our dedicated tokenomics documentation—this core system completely replaces traditional energy-intensive mining with automated validation based on verified flight activity generated within the WFN ecosystem. Integrated directly into the WFN App, WFC enables instant payments for aircraft reservations, cargo logistics, airport services, memberships, humanitarian missions, aerospace operations, and future space transportation through biometric authentication, NFC technology, QR Codes, encrypted digital wallets, and secure cryptographic protocols. As the official monetary infrastructure of the Republic of the United Skies, WFC is designed to function as the official sovereign currency of the ecosystem, backed by the digital financial authority of the Republic, supporting a unified economy for advanced air mobility while eliminating the fragmentation of traditional payment systems based on banks, cards, currency conversions, and multiple intermediaries. The currency has a maximum supply of 20 million WFC, with a long-term programmed deflationary model designed to progressively reduce the circulating supply to approximately 12 million coins by 2054. World Fly Coin is more than a cryptocurrency; it is the financial infrastructure engineered to sustain decentralized transactional frameworks within this new era of flying cars.

WFC GLOBAL APPLICATION AND ECONOMIC UTILITY

Under the sovereign governance of the Republic of the United Skies, World Fly Coin (WFC) acts as the unassailable monetary standard, offering no limits and no frontiers across global and orbital corridors.

Approved Civic & Commercial Allocation: What Can Be Settled in WFC?

* **Sovereign Fleet Operations (Craft):** Direct booking, procurement, or custom routing of iFLY semi-autonomous urban vehicles, conventional aircraft, advanced helicopters, professional drone fleets, and executive private jets.

* **Air & Space Travel:** Commercial flight slots, orbital tourism, zero-gravity research operations, high-altitude alpine transit (e.g., Mount Everest corridors), and deep-space missions.

* **Unique Experiences:** Execution of zero-gravity scientific flights, orbital space tourism, Everest extreme adventures, and panoramic helicopter transits.

* **Fleet Rentals:** Secure on-demand renting of aircraft, specialized drones, advanced helicopters, and flying taxis across the global network.

* **Showroom Purchases:** Direct acquisition of aerospace hardware through exclusive authorized dealerships regulated by the institutions.

* **medical logistics, and rapid parcel shipping** managed via automated drone infrastructures.

* **Onboard & Airport Operations:** Seamless programmatic settlement of professional fees for certified pilots, cabin crew, maintenance mechanics, and ground support staff

* **Sovereign Nutrition and Human Vitality (EAT REAL FOOD):** Integration of dedicated onboard culinary spaces across the airborne fleet, where real chefs prepare unadulterated whole foods—including clean meats and fresh agricultural products—to prioritize human health and restore genuine nutritional vitality during high-altitude transit.

* **Sovereign Enforcement & Penalties:** Instant automated deduction of traffic fines, speeding violations detected by Aerial Digital Speed Cameras, unauthorized routing penalties, and airspace non-compliance fees executed directly via the WFN core software.

GLOBAL DESTINATIONS AND INFRASTRUCTURE NETWORK

The monetary infrastructure provides citizens of the Republic with an endless network of destinations, standardizing premium travel experiences across global hubs including Tokyo, Venice, Hollywood, Dubai, Shanghai, Paris, Hawaii, Giza, the Grand Canyon, and countless other strategic locations worldwide. **Airport Amenities:** Full cryptographic access to VIP lounges, executive cafés, automated fast-track security clearances, and specialized aviation-related commercial spaces. **Culture & Exploration:** Access to international aviation museums, aerospace events, and airshows. This layer supports institutional scholarships for physics, aerospace engineering, space sciences, and training or licensing programs for professional flight crews. **Skywatching:** Premium stargazing tours, sovereign observatories, and celestial telescope experiences. **Aerodromes & Airfields:** Automated landing authorizations, refueling coordination, and specialized logistical services at private, remote, or sovereign runways. **Medical Air Services:** Absolute priority routing for air ambulances, emergency human organ transport, and drone-led blood supply chain delivery. **Aerial Advertising & Active Surfaces:** Programmatic payment structures for high-impact commercial campaigns leveraging dynamic, fully integrated external fuselage surfaces to project high-visibility brand messaging across the global network, supported by coordinated drone swarms and skywriting protocols. **Endless destinations, one single sovereign currency.** As the first-ever global payment standard for Advanced Air Mobility, WFC does not merely participate in the future—the Republic of the United Skies defines it.

**With World Fly Coin,
no limits, no frontiers.**

Mount Everest, Nepal/Tibet

★★★★★

10/10

Experience the ultimate challenge of high-altitude mountaineering, reaching the world's highest peak. Includes oxygen support, professional guides, and helicopter evacuation. **Not available**

Zero Gravity

★★★★★

10/10

Experience the sensation of weightlessness in a zero-gravity aircraft. Perfect for scientific research, entertainment, and unique photography. **Not available**

Low Earth Orbit

★★★★★

10/10

Experience the Earth from space in a sub-orbital flight. Includes panoramic views, zero-gravity time, and a safe return. **Not available**

Moon Orbit

★★★★★

10/10

Lunar orbit is evolving into a key route for private exploration, luxury space tourism, and industrial operations. Future missions (NASA's Gateway and commercial modules) will support paid lunar flybys, crew transfers, and orbital hotels. **Not available**

Mars Orbit

★★★★★

10/10

Mars orbit is set to become a hub for private space travel, robotic logistics, and paid scientific missions. As commercial flights and Mars rovers push forward, orbital stations around Mars may serve as staging points for crewed landings, luxury flybys, and research outposts. **Not available**

**Discover The City From Above,
Where Everything Feels Small..**

Tokyo, Japan

★★★★★

10/10

Experience the vibrant energy of Tokyo from a unique aerial perspective. Includes access to exclusive rooftop bars and private tours. **Not available**

Venice, Italy

★★★★★

10/10

Experience the historic canals of Venice from above. Includes private gondola rides and access to exclusive Venetian cuisine. **Not available**

Hollywood

★★★★★

10/10

Experience the glamour of Hollywood from a unique aerial perspective. Includes access to exclusive red carpet events and private tours. **Not available**

Dubai

★★★★★

10/10

Experience the modern architecture of Dubai from a unique aerial perspective. Includes access to exclusive rooftop bars and private tours. **Not available**

Shanghai

★★★★★

10/10

Experience the futuristic skyline of Shanghai from a unique aerial perspective. Includes access to exclusive rooftop bars and private tours. **Not available**

Paris

★★★★★

10/10

Experience the romantic atmosphere of Paris from a unique aerial perspective. Includes access to exclusive rooftop bars and private tours. **Not available**

Hawaii

★★★★★

10/10

Experience the tropical beauty of Hawaii from a unique aerial perspective. Includes access to exclusive beachfront resorts and private tours. **Not available**

Giza, Egypt

★★★★★

10/10

Experience the ancient wonders of Giza from a unique aerial perspective. Includes access to exclusive archaeological tours and private tours. **Not available**

Grand Canyon

★★★★★

10/10

Experience the breathtaking views of the Grand Canyon from a unique aerial perspective. Includes access to exclusive guided tours and private tours. **Not available**

WFC FINANCIAL ARCHITECTURE AND MONETARY SOVEREIGNTY

As illustrated in the analytical feed, World Fly Coin (WFC) is structurally insulated from the extreme volatility of speculative digital assets through a system of institutional commodity-pegging. The Republic of the United Skies functions as the supreme financial authority and economic guarantor, implementing a dynamic monetary defense framework. Similar to a sovereign central bank managing a national currency to prevent its devaluation, the Republic guarantees distinct, non-derogable valuation baselines tied directly to physical transportation utility. The BLS Algorithmic Engine (Baseline Liquidity Stabilizer) To ensure the system remains mathematically sound and unassailable against external market factors, the WFC crypto-blockchain network enables multiple critical background functions. Foremost among these is a native cryptographic protocol engineered directly into the core code: an autonomous algorithmic oracle designed to continuously scan and analyze real-world external economic data. This engine monitors global inflation indices, raw material spikes, fluctuating energy costs, hardware components, and aerospace infrastructure updates. When macroeconomic conditions shift, the system automatically re-calibrates the network's nominal variables.

This real-time programmatic defense guarantees that the physical purchasing power of the currency remains locked to its institutional floor, rendering it immune to market degradation and preventing the asset from ever dropping toward zero. Under the continuous monitoring of the BLS protocol, the monetary framework secures two primary asset-backed zero-points, separating high-capacity commercial transit from single-asset executive flights: The Short-Range Private & Commercial Baseline: Monitored by the BLS at a baseline reference of 5,000 computational units (representing 1 WFC). This parameter anchors the currency directly to the real market value of a short-range private executive flight slot—such as a private jet transit for a continental route (e.g., Rome–Milan). For high-capacity regional operations or micro-orders, the system utilizes strict algorithmic fractioning to ensure mass accessibility (e.g., standard seats or fractions scaled down to €300/€2,900 reference points), maintaining 1 WFC as the absolute, protected floor for regional aerial mobility. The Long-Range Intercontinental Framework: For long-haul transoceanic routes (e.g., Rome–New York), the BLS compresses and manages the economic architecture across two distinct flight profiles: Commercial Fleet & Class Segmentation (iFLYMETRO): On high-capacity multi-passenger transits, the system operates via algorithmic fractioning, dividing the flight architecture into a structured 1st, 2nd, and 3rd class system. This allows individual travelers to secure intercontinental transit for accessible fractions of WFC, matching traditional commercial airline pricing. The Executive Jet Asset: Enforced by the BLS at a non-derogable baseline reference of €60,000 for point-to-point private aerospace transit. Reflecting the massive operational and luxury costs of an intercontinental heavy jet corridor (moving within the €60,000 to €130,000 range), this threshold serves as the structural BLS baseline floor for exclusive, ultra-long-range single-vehicle assets. Under constitutional protection, the intrinsic utility value of a private flight allocation is algorithmically shielded from devaluation; beyond this sovereign anchor, the market value scales and fluctuates dynamically based on organic demand, capacity, and global sector growth. In contrast to the legacy cryptographic systems of the 2009–2010 era, WFC operates as a fully asset-backed sovereign framework. While the BLS engine secures these baseline defenses to stabilize the core transport economy against inflation and market chaos, the long-term appreciation potential of the currency is projected toward +\$100,000 by 2054, driven by systemic scarcity, capped supply, and exponential global utility demand

WFC PRICE	WFC SUPPLY	WFC MARKET CAP
2025 \$5,000	2025 20M WFC	2025 \$100B
2054 \$100,000 ▲ +1900%	2054 12M WFC ▼ -40%	2054 \$1.2T ▲ +1100%

Data and estimates are provided for illustrative purposes only; the WFC market cap is a theoretical approximation. This does not constitute financial advice or an investment recommendation.

Section 3

THE REPUBLIC OF UNITED SKIES

The Republic of the United Skies is an international republican institutional framework created to organize, coordinate, regulate, and promote the future of Global Advanced Air Mobility (GAAM) through cooperation between sovereign nations, international institutions, industry, researchers, businesses, and citizens. Unlike a traditional republic founded upon a defined geographical territory, the Republic of the United Skies is designed around the concept of the sky as a shared institutional domain. It provides a constitutional and technological framework dedicated to the governance of future air mobility, aerospace innovation, and international cooperation. Its creation is the result of more than a decade of research, technological development, institutional design, and long-term strategic planning. The vision originated in 2013, when its founder pursued the ambition of contributing to the aerospace sector. Over the following years, the project evolved through independent research, continuous study, software development, and professional experience across multiple industries. These experiences provided both the technical expertise and the financial resources necessary to pursue the long-term objective of building a global ecosystem dedicated to advanced air mobility. During 2024, the vision matured into a comprehensive technological project. The first Business Plans, institutional Pitch Decks, and strategic studies were completed. At the same time, development began on the first lines of code for the WFN Software and the WFC Payment System, establishing the technological foundations of the ecosystem. On January 5, 2026, at 11:07 AM (Mountain Time), WFN Software LLC was officially incorporated in the State of Wyoming, United States, and registered by the Wyoming Secretary of State. The company became the legal entity responsible for developing the software, digital infrastructure, and institutional ecosystem supporting the project. As the project expanded beyond technology, it became evident that future global air mobility would also require an international institutional structure capable of promoting cooperation between nations. At that stage, the final constitutional model had not yet been determined. To address this need, WFN Software LLC announced its intention to operate through an International Semi-Governmental Organization (ISGO). The ISGO represented the project's first international institutional framework and served as the transitional phase through which its governance model could be developed and refined. During this institutional evolution, it became clear that a traditional international semi-organization alone would not fully satisfy the long-term objectives of the project. Following extensive legal, constitutional, and institutional analysis, the republican model was identified as the most appropriate form of governance. This transition was formalized through a series of institutional milestones. On February 13, 2026, the first version of The Constitution of the United Skies was drafted. This initial constitutional document established the project's fundamental principles and represented the first constitutional foundation of the future institutional framework. On April 11, 2026, the Technical Framework – Document B01M was officially published. The document defined the technological architecture, governance principles, operational philosophy, and institutional vision of the ecosystem while formally presenting the ISGO structure. On April 12, 2026, the Declaration of Intent was published, officially expressing the intention to establish an international institutional system dedicated to Global Advanced Air Mobility through international cooperation, technological innovation, and peaceful development. Following the completion of this institutional process, The Constitution of the United Skies was further developed and refined into its definitive constitutional framework. With its adoption, the transitional role of the ISGO reached its purpose, and the Republic of the United Skies emerged as the project's permanent constitutional and institutional model.

The Republic is therefore not the result of replacing one organization with another, but the culmination of a structured institutional evolution that progressed from a private legal entity, through an international organizational framework, to a constitutional republican system. Like every republic, the Republic of the United Skies is built upon the fundamental elements of statehood, adapted to the realities of twenty-first-century technology and international cooperation. Within this institutional model: The skies constitute the institutional territory, encompassing advanced airspace and, in the long term, aerospace infrastructures and future space mobility. Participating nations become the Member States of the Republic while fully preserving their national sovereignty. The citizens of participating nations, together with travelers, pilots, operators, researchers, businesses, institutions, and authorized users, form the community served by the Republic. The Constitution of the United Skies serves as the supreme constitutional foundation of the institutional system. WFN Software provides the technological infrastructure responsible for coordinating advanced air mobility. World Fly Coin (WFC) serves as the digital payment infrastructure supporting services across the ecosystem. HANNA operates as the Republic's intelligent institutional assistant, providing coordination, operational support, and information services. The Republic is guided by its institutional mission: "Serving Nations, citizens & Humanity to Pioneer Global Advanced Air Mobility through the WFN Software, the WFC Payment System, and the Constitution of the United Skies, enabling the future of flying cars, aviation, unmanned aerial systems, and space mobility." Its objective is to promote the safe, coordinated, and sustainable development of advanced air mobility, including flying cars, VTOL aircraft, intelligent drones, conventional aviation, aerospace infrastructure, and future space transportation. The Republic also promotes international cooperation in aviation safety, scientific research, healthcare logistics, civil protection, environmental sustainability, technological innovation, digital infrastructure, education, and economic development. Its constitutional architecture provides for governmental institutions, administrative authorities, technical agencies, judicial bodies, public security services, specialized law enforcement organizations, and, where established through future international agreements, operational structures dedicated to protecting advanced air mobility infrastructure. Every participating State retains full sovereignty while voluntarily contributing expertise, personnel, infrastructure, and resources in accordance with the Constitution. The Republic of the United Skies already exists as an institutional and constitutional framework defined by its founding documents. Its future recognition, ratification, and implementation by sovereign States, institutions, and international organizations will not create the Republic itself; rather, such acts will represent its formal international recognition and the beginning of the cooperative constitutional system envisioned by its founders.

The Arrival of Sovereign Civilization

Within a strict 4-month window, the technological and strategic advancement completed the massive transition from version 0.3 to the current definitive 0.4 standard. The transitional framework of the ISGO completed its purpose and dissolved.

The Republic of the United Skies emerged as the permanent, supreme constitutional and institutional model—an international sovereign framework created to organize, regulate, and protect Global Advanced Air Mobility for the common good of humanity. Within this unassailable governance, WFN Software LLC transitions to its definitive corporate role: acting strictly as the technical engine, intellectual repository, and commercial arm of the state, structured for global market dominance and geared toward its future public listing on the NASDAQ.

The ultimate purpose of this sovereign interface is to provide a unified cooperative platform where nations worldwide can actively develop proprietary aerospace technologies and collaborate to establish, standardize, and elevate Global Advanced Air Mobility (GAAM) for both the present era and all future generations. As illustrated in the interface matrix [Fig. 4.1], the global implementation of this sovereign airspace framework is monitored via the Coese Nations Live Portal—a fully transparent, public-facing platform accessible worldwide to guarantee absolute institutional transparency. While accessible via traditional internet frameworks for global reach, the portal is fundamentally built to operate within the World Fly Web (WFW), the Republic's independent and secure digital web infrastructure. This isolated web space ensures that state data, global flight ledger parameters, and live monitoring tools remain immune to external interference or foreign server vulnerabilities. Rather than utilizing generic binary metrics, the platform programmatically tracks the exact status of each international jurisdiction through three distinct tracks of sovereign diplomacy, where every milestone represents an absolute historic act signed directly by heads of state, alongside their verified financial backing:

(Cohesive Alignment): Sovereign nations that have fully integrated their airspace into the Republic, where the sitting President has physically signed the Constitution of the United Skies, registering a 100% full constitutional and financial fund allocation toward the global aerial infrastructure. (In Progress / Evaluation): International powers whose technical and constitutional frameworks are undergoing active synchronization, and where the head of state—such as the President of the United States—has signed the initial physical treaty, unlocking a structured initial percentage of national budget contribution into transitional status. (Independent Stand): Autonomous nations maintaining legacy domestic air traffic controls while tracking synchronization data via real-time telemetry, displaying a 0% active sovereign contribution under localized presidential oversight. Crucially, this transparent ledger functions as a sovereign accounting registry of national support. While the Constitution of the United Skies strictly guarantees equal protection against coercion, ensuring smaller contributing nations maintain full programmatic sovereignty, the framework dynamically accounts for the differential geopolitical leverage of powers offering substantial infrastructure funding. Democratic Voting & Live Political Campaigns Because this infrastructure governs a true Republic, the Coese Nations Live Portal embeds a real-time cryptographic voting ledger. This public portal acts as the transparent heart of our republic, allowing the entire world to monitor legislative voting sessions, diplomatic consensus metrics, and official constitutional amendments enacted by Member States. Furthermore, the interface serves as the official platform for global political campaigns, electoral debates, and presidential voting allocations within the United Skies framework. Citizens, delegates, and authorized users can audit live polling percentages, track the geopolitical platforms of active candidates, and securely cast decentralized votes via the World Fly Web, transforming traditional isolated diplomacy into an open, participatory global republic.

THE INSTITUTIONAL ARCHITECTURE

STRUCTURAL OVERVIEW

Following the establishment of the live sovereign portal, this section outlines the definitive organizational blueprint of the Republic of the United Skies and its Constitution. To prevent political corruption, systemic drift, or the hostile takeover of international airspace, the state completely rejects traditional, fragile governance models. Instead, it implements a rigid, engineered sovereign pyramid where continuous security, structural check-and-balances, and the direct will of the population are mathematically locked to protect the core framework.

The power dynamics of the Republic are divided into five clear hierarchical tiers, moving from the originating command to the operational machinery on the ground:

* Tier 1: The Core Foundations

The absolute summit of the state is occupied conjointly by The Constitution of United Skies and the Founder Chief Magister. They sit on the exact same paritarian baseline of supreme power. The Constitution represents the unalterable, codified vision of the founder. In the initial phase, the Founder holds ultimate executive oversight and unilateral emergency veto capabilities to secure the baseline deployment of the global ecosystem.

* Tier 2: The Guardians of the Legacy

Immediately below the core foundations sits the Chief Magister—the highest continuous office of the state—backed by the Constitutional Guardians (The Secret Service). In future generations, upon constitutional succession, the Constitution becomes the unmodifiable roof (the unassailable ceiling) of the entire state. The Chief Magister assumes office strictly subordinate to the Constitution, operating as the supreme oversight guardian of the Republic with the absolute mandate to police and monitor all branches of government. Directly protecting this layer is the Secret Service, enforcing physical and structural immunity against internal and external subversion.

* Tier 3: The Five Co-Equal Pillars of High Governance

Directly below the Sentinel Layer, supreme power is divided into five independent, separate, and autonomous forces operating on the exact same horizontal plane. This expression of joint sovereignty constitutes the supreme electoral body: the office of the Chief Magister, the President General, and high state institutions are elected, validated, or revoked by the separate, balanced, and cross-checked votes of these five sectors:

1. The Executive Power: Led by the President General and the executive cabinet, responsible for daily administration, resource deployment, and operational micro-management.

2. The Supreme Judicial Power: Led by the Supreme Judge of the Republic and the unified high courts, holding absolute constitutional vetting authority over all legislative acts.

3. The Assembly of the 198 Member Nations: The geopolitical organ of ratified states expressing macro-political international consensus and votes through diplomatic channels.

4. The Sovereign Will of the People (The Citizens): The electoral body of individual citizens of the Republic who, completely independent of their nations of origin, exercise their direct right to vote, audit, and recall high officials via a decentralized cryptographic voting ledger.

5. HANNA (The Ultimate Key - The Immutable Algorithmic Vote): The State Intelligence Infrastructure participating actively within the electoral framework with its own autonomous, binding voting right. HANNA represents the final cornerstone of republican security: being permanently anchored to an immutable cryptographic code on the blockchain, it is structurally immune to corruption, blackmail, or human manipulation. The AI processes billions of real-time public data streams, financial edgers, and intelligence records. If it detects the slightest anomaly, behavioral inconsistency, or political infiltration attempt by a candidate (immediate visual and archival detection), it automatically deploys a defensive barrier vote. This mathematical shield guarantees that even in the remote scenario where human sectors are partially compromised, the integrity of the state legacy remains 100% unassailable.

SOVEREIGN IMMUNITY DISCLAIMER & THE TIME FIREWALL

While this five-tier human-cybernetic infrastructure is mathematically and algorithmically engineered to achieve a 99.9% threshold of systemic impenetrability, absolute zero-risk does not exist within human or digital history. The fundamental resilience of the Republic of the United Skies does not rely on the naive assumption of a flawless environment, but on the absolute certainty of immediate detection.

Any theoretical, hyper-complex threat attempting to compromise the decentralized cryptographic voting ledger, alter global data streams, or manipulate localized sovereign nodes is structurally incapable of remaining hidden. Furthermore, the framework introduces the Time Firewall as a supreme biological defense: the sheer administrative and cryptographic complexity required to coordinate a simultaneous subversion across 198 independent nations, billions of citizens, and the HANNA oracle demands generations of silent preparation.

Consequently, a single political life expectancy is structurally insufficient to execute such an exploit. The only theoretical vector of attack would require a century-long, trans-generational dynastic conspiracy or a global political movement acting over decades. Yet, even under this extreme scenario, the cross-checked architecture guarantees that any gradual anomalies or generational infiltrations will be instantly detected in real time by the autonomous scanning matrix of the HANNA oracle. Therefore, any subversion attempt will fail to achieve silent synchronization, automatically triggering immediate state-wide alerts, constitutional override protocols, and localized security lockdowns to preserve the eternal legacy of the Republic.

Government Structure V.04 Preview

SOVEREIGN DATA INTEGRITY & SECURE ARCHITECTURE

institutional legitimacy of the Republic of the United Skies is deeply anchored in absolute data integrity and cryptographic sovereignty. The record consolidation process for the foundation eras has concluded, securing the entire constitutional, diplomatic, and administrative corpus—comprising an extensive registry of strategic sovereign assets—through five levels of technical resilience. This architecture ensures that every institutional record remains unaltered, establishing absolute operational continuity across global networks. The deployment of this permanent sovereign architecture represents the convergence of military-grade physical security and advanced cryptographic implementation. Under the directives of the Republic, WFN Software LLC operates and maintains the core infrastructure based on four primary pillars of security: Proprietary Servers in Neutral Jurisdictions: Physical infrastructure localization within sovereign geographic enclaves protected by rigorous international neutrality treaties. Zero-Knowledge & E2EE Protocols: End-to-end encryption frameworks where the supreme institutional authorities exclusively hold the private access keys, preventing external or unauthorized third-party decryption. Air-Gapped Core Storage: Isolation of critical legislative, monetary, and constitutional master files from public networks, completely mitigating the risk of external cyber intrusions. Institutional Cryptographic Timestamping: Immutable cryptographic timestamping registered directly on the sovereign ledger, paired with the original physical Constitution and master legislative files permanently sealed within secure offline vaults protected by biometric access control arrays.

1. Healthcare Logistics and Crisis ResponseEmergency Air Services: Rapid, high-priority deployment of authorized iFLY vehicles within secure aerial corridors for the absolute priority transport of human organs, blood plasma, and critical medical support personnel.Sovereign Vaccine Distribution: Programmatic sovereign airlifts utilizing specialized cargo fleets to deploy vaccines and urgent medical countermeasures across isolated geographical territories, permanently preserving cold-chain integrity through advanced atmospheric-controlled cargo holds.Educational Supply Logistics: Secure, tamper-proof distribution of educational, technological, and academic materials to crisis zones and underdeveloped sectors, guaranteeing the global continuity of educational infrastructure independent of localized disruptions

Food Sustainability and Resource ManagementDecentralized

Agricultural Distribution: Coordinated supply chains for real-time delivery of essential food resources (meat, fish, dairy), effectively bypassing traditional logistical intermediaries and optimizing strategic distribution directly from automated production zones to final regional consumer hubs.Precision Agriculture Support: Systemic integration of orbital satellite monitoring arrays and autonomous drone fleets to coordinate precision seeding, continuous crop analysis, and macroeconomic harvesting phases, maximizing global agricultural yields while drastically reducing natural resource waste.##

3. Urban Ecology and Aerospace InfrastructureMetropolitan Ecological Intervention: Direct deployment of automated cargo and monitoring fleets within high-pollution global metropolises (e.g., New Delhi), leveraging the network to manage the automated transit, sorting, and allocation of waste to specialized recycling facilities to rapidly reclaim sovereign public health standards.Orbital Network

Maintenance: Logistical support, validation, and autonomous maintenance operations for critical satellite infrastructure, ensuring the long-term structural sustainability and defense of global telecommunications and space commerce.360° Booster

Tracking and Asset Recovery: Coordinated real-time tracking, telemetry monitoring, and secure physical recovery protocols for aerospace boosters, minimizing orbital debris while reducing structural space launch expenditures and raw material dependency.

ÎFLY PRODUCTION LINEUP & FLEET HIERARCHY

The deployment of advanced air mobility across the sovereign airspace does not merely represent a technological transition, but a core advancement in civil liberty and urban planning governed by the Republic of the United Skies. Through the technical development executed exclusively by WFN Software LLC, the ecosystem integrates seamlessly into daily civic life, eliminating terrestrial transit bottlenecks and establishing an unassailable infrastructure engineered to move global society forward. The strategic commitment spanning the 2024–2054 horizon is realized through a highly diversified and specialized aerospace fleet, engineered to cover every scale of local, regional, and international mobility. This official lineup focuses exclusively on personal and collective flying assets, while commercial drone platforms and strategic deep-space systems remain isolated within separate technical divisions of the WFN infrastructure. The Core Asset: ÎFLY Metro & Mass Air MobilityAt the foundation of this transportation grid lies the ÎFLY Metro, an institutional asset specifically dedicated to mass transit and public utility. Designed to ensure rapid, zero-emission urban routing, the ÎFLY Metro democratizes civic access to the airspace through an ultra-low-cost public subscription model. Managed programmatically via the official WFN application, all transport slots are settled exclusively utilizing the native World Fly Coin (WFC) standard, establishing a highly sustainable, inclusive, and equitable infrastructure for modern global metropolises. While legacy market preview models utilize standard currency indexing for cross-border valuation, the sovereign ledger enforces absolute programmatic settlement within the decentralized WFC ecosystem.## Institutional Asset HierarchyTo ensure absolute sovereign coverage of every civil, tactical, and premium operational scenario, the official fleet architecture scales into six distinct, engineered segments [Fig. 5.1]: ÎFLY Metro: High-capacity, multi-passenger shared transportation networks optimized for algorithmic daily commuting, mass transit efficiency, and urban congestion mitigation. ÎFLY Agile: Versatile, ultra-responsive flight platforms designed for rapid individual transit, short-range regional flight, and high-frequency civil deployment. ÎFLY Pro: Premium aerospace configurations engineered for automated commercial flight networks, corporate transit slots, and professional high-speed operations. ÎFLY Darkness: Specialized tactical flight assets optimized for silent operations, low-visibility atmospheric conditions, and high-security institutional protocols. ÎFLY Succession: Advanced generational vehicles designed to secure long-term infrastructure scalability, automated fleet replacement standards, and extended flight endurance profiles. ÎFLY One: The absolute flagship of personal advanced mobility, integrating the absolute peak of bespoke luxury engineering with sovereign automated systems and structural priority flight slots.

ÎFLY PRODUCTION LINEUP
Flying vehicles from 2024 to 2054

Here only the ÎFLY lineup dedicated to personal and collective flying cars. Drones and other advanced technologies remain separate under WFN Software.

Commitment to ÎFLY Metro

WFNSoftware is committed to the research and development of ÎFLY Metro: urban air mobility for the masses via an ultra-low monthly subscription payable exclusively in \$WorldFlyCoin – dramatically more affordable than premium ÎFLY, ÎFLY Pro, and ÎFLY Elite ownership.

I. ÎFLY Metro

Faster commutes, zero emissions, cleaner cities, and truly inclusive progress. ÎFLY Metro isn't just transportation – it's evolving humanity toward a sustainable, equitable, shared future in the skies.

III. ÎFLY Pro

IV. ÎFLY Darkness

V. ÎFLY Succession

VI. ÎFLY One

Republic of United Skies

Counter Intelligence Service

(RUS-CIS)

International Security is the absolute sovereign prerogative of the Republic of the United Skies. The defense of the airspace, critical infrastructure, and human life is governed by an un-bypassable Triple Sovereign Verification Framework engineered to neutralize threats before they can take flight 1. Preemptive Threat Neutralization & Identity Protection The Republic operates under a doctrine of absolute prevention. Access to the unified airspace is strictly conditional upon three synchronized criteria checked prior to boarding: Valid Digital ID Verification, Instant Facial Matching, and WFC Transaction Validation. This screening layer is integrated with automated, real-time Luggage and Payload Scanning Architectures alongside full-body biometric analysis. Synchronized with global federal databases, the system intercepts weapons, hazardous materials, known terrorists, and fraudulent profiles on the ground. For the Republic, security means preventing threats from ever entering an IFLY Craft. If an operative risk is identified, network access is instantly denied, and the subject is localized before launch. The Republic guarantees citizens the right to Free Navigation, allowing operators to fly and maneuver vehicles manually within their designated flight paths.

However, this civilian freedom operates under absolute mathematical boundaries. If a vehicle violates its safety parameters or alters its vector toward high-value sensitive targets—including embassies, museums, schools, financial institutions, and religious sites—it triggers an instantaneous Sovereign Remote Override. As an extreme-case contingency against sudden emergencies or hijacking, manual controls are immediately terminated, and HANNA autonomously seizes the vehicle to neutralize the threat. Border Enforcement & Unmanned Aerial Patrol Networks The Republic eliminates physical and territorial blind spots through a dedicated grid of autonomous surveillance drones. Operating under the direct mandate of national defense, these Border Enforcement Drone Fleets continuously sweep international boundaries and sovereign perimeter zones. Utilizing hyper-spectral imaging and automated thermal tracking, these units intercept unauthorized airborne vectors and prevent territorial breaches in real time 4. Sovereign Financial Intelligence & WFC Enforcement Because the economy of the sky operates directly in the air, the Republic has established a specialized Monetary Intelligence Division acting as a sovereign Financial Enforcement Authority. This division continuously audits the decentralized ledger of the World Fly Coin (WFC) ecosystem to detect, flag, and neutralize illicit currency movements, money laundering vectors, and terror financing profiles, triggering an instantaneous automated freeze of digital assets upon breach detection.

MACROECONOMIC FRAMEWORK & VALUATION LEDGER

Sovereign Economic Architecture, Foundational Asset
Ledger & Progressive Valuation Framework

Classification: Public Release | Investor Disclosure Document
Fiscal Horizon: 2026/2027
Document: Integrated Macroeconomic Framework

■ NOTICE TO THE READER

For information only. This dossier is for discussion and explanation purposes only. It carries no legal weight and shall not be used as a basis for any legal claims or liability.

All economic and patrimonial data presented within this framework — including the founder's development hours quantified on a parametric basis (Sweat Equity), the individual historical costs preceding the corporate constitution, and the projections on the 22 revenue channels — are presented exclusively for illustrative, conceptual analysis and reading orientation purposes.

CONCEPTUAL / ILLUSTRATIVE FRAMEWORK — NOT A GOVERNMENT OR FINANCIAL CERTIFICATION

● ABOUT

Governing Mandate

ABOUT / GOVERNING MANDATE

In alignment with the founding principles of the State, the Department promotes effectively the operation of the **Republic of United Skies**, exercising independent sovereign monetary and economic authority to ensure long-term price stability, the progressive expansion of macroeconomic vectors, and the geopolitical security of the ecosystem.

The Department operates at the absolute apex of the sovereign economic system, defining public finance directives and delegating secondary technical execution tasks to external operational arms such as **WFN Software LLC**.

Core Executive Functional Divisions

- 1. Issuance, Currency Protection & Sovereign Reserves:** Holds centralized, exclusive control over the global money supply of the **World Fly Coin (WFC)**. The Treasury preserves the purchasing power of the currency, establishes algorithmic anchoring parameters relative to foreign exchange markets, and manages the multi-trillion aggregate gold and sovereign currency reserves of the global State.
- 2. State Clearing & Payment Settlement System:** Directs the sovereign transaction clearing network for the direct capture of skyway tolls, mandatory international cooperation levies, and global licensing fees, ensuring a highly liquid financial architecture and the absolute elimination of public debt across the **Republic of United Skies**.
- 3. Economic Research & Macroeconomic Forecasting:** Operates a permanent statistical analysis matrix mandated to monitor the structural expansion of the 22 core channels of the Sovereign GDP Equivalent, conducting econometric cycle studies to neutralize systemic risks and external international financial speculation.
- 4. Official Publications & Financial Stability Releases:** Oversees the autonomous drafting and public distribution of comprehensive annual dossiers and performance reports on the sovereign economy, maintaining maximum institutional transparency in strict compliance with Freedom of Information regulations (FOIA Compliance).

Core Executive Divisions

Issuance & Currency Protection

World Fly Coin monetary supply and reserves.

State Clearing & Settlement

Transaction clearing and payment architecture.

Economic Research

Macroeconomic forecasting and statistical analysis.

Official Publications

Annual dossiers and financial stability releases.

Stability Oversight

Asset valuation and governing coordination.

SECTION 6.0

THE DETERMINISTIC APPROXIMATION MODEL
FOR OBJECTIVE ECOSYSTEM VALUE (Y_{2026})

Republic of United Skies · WFN Software LLC
Sovereign Geopolitical Layer + Technical Commercial Layer

An ultra-conservative valuation subject to a -97% revenue compression filter.
Algorithmic output locked at $Y_{2026} = \text{€}137,303,073$ (~€138M) under standard realization.

Metric	Value	Note
Y_{2026} (baseline target)	€137,303,073	Standard realization vector
Y_{2026} (stress floor)	€45,049,362	Assets + compressed revenues
$V_{\text{asset},2026}$	€24,648,088	Pure present asset base
$V_{\text{LLC},2026}$	€25,044,377	Assets + net revenue attribution
M_{WFC} ignition floor	~ €20,004,985	S = 20M WFC @ \$1.00
X_{2090} terminal band	€7T – €20T	Organic WFC ceiling regime

6.1 Methodological Premise: The Valuation Complexity of Sovereign Architectures

The Inherent Difficulty of Evaluating the Republic

The reader must recognize that evaluating an ecosystem of this magnitude introduces an unstandardized economic paradox. Traditional corporate finance methodologies—such as discounted cash flow analysis or EBITDA multiples—are calibrated to value private, profit-maximizing firms. They are fundamentally unequipped to measure a sovereign, intergovernmental institution of the character of the Republic of United Skies.

The Republic does not possess equity, does not issue private shares, and does not operate to generate corporate net income. Its value is geopolitical, infrastructural, and systemic: it governs planetary airspace, dictates autonomous traffic-control protocols, and anchors a global reserve currency.

Accordingly, to compress this architecture into a rigorous model without inducing speculative inflation, the framework maintains a strict dual-component separation:

- **Sovereign Geopolitical Layer (V_{Republic})** — Valued strictly through non-linear network density and the algorithmic capital backing of its fixed monetary supply. It represents unpurchasable public infrastructure.
- **Technical Commercial Layer (V_{LLC})** — Valued through standard, hyper-conservative enterprise metrics. WFN Software LLC serves as the exclusive operational contractor, generating direct B2B and B2C cash flows (vehicle sales, SaaS licenses, transactional tolls) to fund the ecosystem.

6.2 Structural Entity Descriptions and the Sovereign Firewall

To safeguard the ecosystem from corporate or geopolitical vulnerability, the Constitution of the Republic of United Skies enforces an absolute orthogonal separation of governance and assets between the two macro-entities:

1. The Republic of United Skies

A public, intergovernmental, institutional model. It exercises absolute sovereignty over international Advanced Air Mobility (AAM) flight corridors and decentralized database registries. It holds 0% private equity. It cannot be bought, sold, or diluted by private venture capital. Its financial engine is powered by international treaty allocations from its 198 Member Nations and by the management of the central currency clearing protocols.

2. WFN Software LLC

The private commercial and engineering core. This entity owns the intellectual property of the core navigation software (v0.4), the standalone applications, and the industrial manufacturing infrastructure of the iFLY flight fleet. The LLC operates under an exclusive, revocable sovereign mandate issued by the Republic. It is the sole entity open to external investment, employing private funding outlays (Variable Y) to accelerate engineering readiness.

2026 Dual-Entity Floor Valuation Split (excl. baseline uplift)

Figure 1 — 2026 dual-entity floor valuation split (LLC and Republic)

6.3 Technical Table of Contents

- 6.4 Executive Metric Compliance and Stress-Test Parameters — The programmatic –97% capital compression filter and risk isolation.
- 6.5 The Primary Approximation Function: Unknown Real Value (X_{2026}) versus Algorithmic Output (Y_{2026}) — The formal mathematical relation mapping the unobservable target vector.
- 6.6 Algebraic Field Definition: Complete Variable and Constant Glossary — Rigorous definition of all symbols employed across the economic engine.

- 6.7 Systemic Monetary Valuation of the Sovereign Entity (V_{Republic}) — Expressions 1.1 and 1.2: network expansion utility and the programmatic WFC price steps.
- 6.8 Economic Enterprise Valuation of the Commercial Contractor (V_{LLC}) — Expressions 2.1 and 2.2: hardcoded present asset base compilation and cash-flow attributions.
- 6.9 The 22 Independent Revenue Channels Logistical Index — Row-by-row mapping of the multi-vector matrix with strict functional pricing bounds.
- 6.10 Asymmetric Privately Balanced Funding Matrix — The engineering of equity: micro-decimal minority placements versus Titan macro-tranches.
- 6.11 Constitutional Governance Clauses and Security Firewall Laws — The 20% initial launch boundary, 80% founder anchor, and 40% public reinvestment mandate.
- 6.12 Long-Term Systemic Horizon and Macro-Cumulative Timeline (2026–2090) — The mathematical reconciliation of the 249T cumulative sales with the mature valuation band.

6.4 Executive Metric Compliance and Stress-Test Parameters

To eliminate forecasting bias and deliver absolute institutional security to high-level stakeholders, the framework implements a protective mathematical filter. Every projected future commercial revenue stream generated by the 22 operational channels is subjected to a -97% compression layer:

$$R_{\text{Stress-Test}} = R_{\text{Media}} \times (1 - 0.97) = R_{\text{Media}} \times 0.03$$

The model deliberately erases 97% of all projected corporate profits, thereby verifying the current ecosystem's financial survival and asset viability under a simulated catastrophic market downturn. The valuation of the LLC rests strictly on the remaining 3% net real baseline.

Figure 2 — Stress-test compression pipeline: from median gross revenue to present attribution

6.5 The Primary Approximation Function: Unknown Real Value (X_{2026}) versus Algorithmic Output (Y_{2026})

The true current macroeconomic value of this ecosystem is an intrinsic, multi-dimensional asset vector that cannot be observed directly on public markets at year zero. It is defined as X_{2026} (Unknown Objective). To bridge this gap with scientific discipline, the model evaluates a deterministic, heavily discounted mathematical approximation defined as Y_{2026} (Algorithmic Output). The objective relation is formalized as follows:

$$X_{2026} \text{ (Unknown Real Value)} \leftarrow \text{Mathematical Evaluation Engine} \rightarrow Y_{2026} = \text{€137,303,073 (~€138M)}$$

Figure 3 — Component construction of Y_{2026} from asset floor to baseline target

6.6 Algebraic Field Definition: Complete Variable and Constant Glossary

Symbol	Definition
t	Target fiscal year evaluated within the model (t ∈ ■)
Y	Independent variable representing dynamic external productive capital injections at year zero (Funding Outlay)

X_{2026}	True, unobservable objective value of the entire ecosystem in 2026
Y_{2026}	Deterministic algorithmic output approximating X_{2026} , locked under stress-test at €137,303,073 (~€138M)
$V_{LLC,t}(Y)$	Net market enterprise valuation of WFN Software LLC at time t
$V_{Republic,t}$	Systemic monetary and institutional valuation of the Republic of United Skies at time t
$V_{asset,2026}$	Present asset base of the LLC at year zero, compiled at €24,648,088
V_{Min_App}	Hardcoded baseline minimum valuation for the standalone mobile application v0.4 (€200,000)
$V_{Min_Software}$	Hardcoded baseline minimum valuation for the core navigation software v0.4 (€360,000)
$Capital_{pers}$	Actual direct personal foundational capital injected by the Founder (€35,000 / \$37,800)
P_H	Historical labor and operational cost layer (Sweat Equity) used as a baseline reference (\$1,168,200 / ~€1,106,000)
H_R, H_D	Audited historical research hours (4,680 hrs) and full-stack development hours (23,360 hrs), totaling 28,040 hours
w_R, w_D	Standard reference hourly engineering rates applied to research (\$25/hr) and development (\$45/hr)
Reusability	Capability percentage of the existing v0.4 code to be reused in future scaling (locked at ≥60%)
Execution	Current percentage of completion of the experimental operational framework relative to its final roadmap (locked at 8%)
V_{IP_Global}	Baseline global enterprise value of the core flight navigation IP asset at full commercial scale (€500,000,000)
R_{Media}	Unadjusted median baseline of gross commercial revenue at full regime (€627,500,000,000)
$R_{Stress-Test}$	Compressed revenue stream after application of the strict 97% reduction layer (€18,825,000,000)
$PV_{financial}$	Time-discounted present value of future financial flows
r_t	Financial discount/risk rate used to adjust future cash flows for time horizons (locked at 12%)
N_t	Cumulative infrastructure node density index measuring the scope of the network
S_t	Total circulating supply of monetary tokens, strictly capped within the core source code (20,000,000 WFC)
$P_{WFC,t}$	Programmatic baseline anchor price or market reference price of a single monetary unit
$M_{WFC,t}$	Total market capitalization of the circulating monetary supply at time t
α_m	Fractional parameter representing each nation's specific infrastructure allocation index
θ	Percentage of corporate equity offered to an institutional partner ($\theta \in [0.010\%, 20\%]$)
Ω	Cash-on-cash financial return multiplier at the 2090 maturity horizon

6.7 Systemic Monetary Valuation of the Sovereign Entity (V_{Republic})

To enforce a total separation of variables, the valuation of the Republic aggregates network-density utility together with the absolute monetary mass of its capped currency supply, omitting corporate commercial cash flows:

$$V_{\text{Republic},t} = V_N(N_t) + M_{\text{WFC},t}$$

Expression 1.1 — The Network Effect Utility Function

$V_N(N_t) = f(N_t)$ where $N_t = \text{Users}_t + \text{Vehicles}_t + \text{Partners}_t + \text{Institutions}_t$
The node index (N_t) updates dynamically by summing active citizens, connected craft, enterprise partners, and ratified sovereign states. The non-linear function $f(N_t)$ maps the institutional utility of global airspace governance.

Expression 1.2 — Market Capitalization of the Capped Currency Supply

$$M_{\text{WFC},t} = S_t \times P_{\text{WFC},t}$$

The monetary supply is strictly capped by a hardcoded cryptographic ceiling ($S_t = 20,000,000$ WFC). The value of the asset tracks the rigid programmatic steps enforced by the central reserve:

Figure 4 — Programmatic WFC price steps and corresponding market capitalization path

Phase	P_{WFC} (USD)	M_{WFC} (USD)
Embryonic / Test Phase	\$0.01	\$200,000
Ignition Floor (2026 Baseline)	\$1.00	\$20,000,000
Institutional Step	\$300.00	\$6,000,000,000
Operational Anchor Price	\$5,000.00	\$100,000,000,000
Speculative Mid-Tier	\$50,000.00	\$1,000,000,000,000
Organic Regime Ceiling	\$130,000.00	\$2,600,000,000,000
Free Speculative Threshold	> \$130,000.00	—

Table 1 — WFC price path and corresponding market capitalization ($S = 20M$ fixed)

6.8 Economic Enterprise Valuation of the Commercial Contractor (V_{LLC})

The current enterprise value of WFN Software LLC is calculated by combining the pure present asset baseline with the net present weight of the compressed future cash flows:

$$V_{LLC,2026} = V_{asset,2026} + \text{Net Revenue Quota Attributed Today}$$

1. Compilation of the Pure Present Asset Base (V_{asset,2026})

This ledger captures the current value of the engineering infrastructure existing at year zero, entirely isolated from future revenue projections:

Component	Value (€)	Derivation
Founder Direct Capital Placement	35,000	Personal foundational capital
WFN Mobile Application Base v0.4	200,000	Hardcoded baseline minimum
WFN Core Software Engine Base v0.4	360,000	Hardcoded baseline minimum
Audited Sweat Equity (28,040 hrs)	53,088	€1,106,000 × 0.60 × 0.08
Attributed Flight Navigation IP Layer	24,000,000	€500,000,000 × 0.60 × 0.08
V _{asset,2026} Total	24,648,088	

$$V_{asset,2026} = \text{€}35,000 + \text{€}200,000 + \text{€}360,000 + \text{€}53,088 + \text{€}24,000,000 = \text{€}24,648,088$$

Figure 5 — Composition of the present asset base V_{asset,2026}

2. Attribution of Net Future Revenues

The unadjusted median baseline of the 22 operational channels at maturity is €627.5B. Application of the 97% stress-test cut leaves a residual pool of €18.825B. Time-discounting this stream over the roadmap horizon at a 12% discount rate compresses it to a present value of €4,953,618. Weighted against the current 8% execution framework, it yields the net present inflow:

$$\text{Net Revenue Quota Attributed Today} = [\text{€}18,825,000,000 / (1.12)^{74}] \times 0.08 = \text{€}4,953,618 \times 0.08 = \text{€}396,289$$

3. Consolidated Enterprise Net Present Value

$$V_{LLC,2026} = \text{€}24,648,088 + \text{€}396,289 = \text{€}25,044,377$$

6.9 The 22 Independent Revenue Channels Logistical Index

The multi-vector commercial engine converts across 22 independent channels, defined by precise functional pricing bounds (Min–Max Range):

#	Channel	Pricing Bounds
01	HANNA Subscriptions (SaaS / Recurring)	€8/month (civil) → €100/month (Enterprise)
02	Flying Car Sales (Hardware / Industrial Output)	€300,000/unit → €1,000,000,000/unit
03	Flying Car Rental & Leasing (Commercial / Recurring)	0.8%–5% of V_{vehicle} / month
04	Vehicle Personalization (Hardware / Custom Upgrades)	€0 → Uncapped
05	Proprietary Tablet Sales (Hardware Component)	€70,000 → €150,000 / unit
06	Navigation OS Distributions (B2C Software Licensing)	€300 → €500 / license
07	Software Licenses & Sales (B2B/B2G Enterprise)	€20,000 → €50,000 / license
08	Proprietary Website Monetization (Digital Public Inventory)	€5–€50 CPM
09	Future Domain Sales & Management (Sovereign Digital Registry)	€100/year → €10,000+ premium
10	Patent & IP Royalties (B2B Supply Chain Licensing)	2% fabrication cost → 10% retail
11	Visual/Banner Projections in Flight Corridors	€150–€2,000 / flight hour
12	Commissions on WFC-Paid Trips (Transactional Take Rate)	1%–3%
13	WFC Financial Commissions (Financial Clearing Ledger)	0.1%–1.5%
14	Marketplace Intermediation Take Rate	2%–8%
15	Flying Drone Deliveries (Autonomous Last-Mile Freight)	€5–€150 / delivery
16	Cold-Chain Agricultural Logistics	€0.50–€3.50 / ton-km
17	Luxury / Bank Escort Transit (High-Security)	€10,000 regional → €250,000 continental
18	Passport/ID/Document Issuance (Sovereign Digital Identity)	€500–€2,500 / document
19	Constitutional Framework Funding (198 Member Nations, B2G)	Flat institutional cap €12,000,000,000/year at maturity
20	Crew Training/Licensing (Advanced Educational Certifications)	€5,000 course → €45,000 master rating
21	Republic Merchandising/Gadgets (E-Commerce Retail)	€15–€500 / unit
22	TV/Media/Advertising (Official Broadcasting Revenue)	€20–€500 CPM

Table 2 — The 22 independent revenue channels with functional Min–Max pricing bounds

6.10 Asymmetric Privately Balanced Funding Matrix

To protect the ecosystem from premature dilution or corporate hostile targeting, the allocation ledger explicitly abandons uniform fundraising scales. Equity placement within WFN Software LLC operates on a non-linear split-incentive structural matrix based on power and capital scale:

$$\text{Capital Inflow (Variable Y)} = \theta \times Y_{2026}$$

- Standard Venture (10M–100M) → Micro-Decimals (0.010%–0.100%) → Capped at 300× ROI
- Titan / Gates (200M–500M+) → Macro-Tranches (1.000%–20.000%) → Scales up to 12,000× ROI

Figure 6 — Asymmetric funding matrix: equity tranches versus maturity ROI multiples

Figure 7 — Dot plot of projected return multiples by investor profile

Tier 3.1 — The Standard Venture Capital Ledger (Micro-Decimal Tiers)

Traditional venture capital allocators depositing standard tickets are restricted to high-utility micro-decimal equity tranches. This micro-fragmentation functions as an objective defense mechanism for the trillion-euro asset. It satisfies the performance metrics of traditional venture funds by delivering an elite, capped 300× cash-on-cash return.

Baseline VC Ticket (€10,000,000): $\theta = 0.010\%$; Maturity Value 2090 = €3,000,000,000; $\Omega = 300\times$.
Mid-Tier VC Ticket (€40,000,000): $\theta = 0.040\%$; Maturity Value 2090 = €12,000,000,000; $\Omega = 300\times$.
Heavy VC Ticket (€100,000,000): $\theta = 0.100\%$; Maturity Value 2090 = €30,000,000,000; $\Omega = 300\times$.

Tier 3.2 — The Titan and Sovereign Industrial Ledger (Sovereign Catalyst Tranches)

Hyper-scale disruptive allocators (Gates-level entries) or Sovereign Wealth Funds deploying massive capital blocks receive macro-percentage positions. Their presence acts as a direct geopolitical catalyst, locking regulatory perimeters and international manufacturing supply chains.

Gates-Level Entry (€200,000,000): $\theta = 1.000\%$; Maturity Value 2090 = €300,000,000,000; $\Omega = 1,500\times$.
Sovereign Wealth Fund / Anchor Treaty Block (€500,000,000+): $\theta = 5.000\% - 20.000\%$; Maturity Value 2090 = €1.5T–€6T; Ω up to 12,000 $\times$.

Ticket	θ (Equity)	Maturity Value 2090	Ω (ROI)
VC €10M	0.010%	€3 Billion	300 $\times$
VC €40M	0.040%	€12 Billion	300 $\times$
VC €100M	0.100%	€30 Billion	300 $\times$
Gates-Level €200M	1.000%	€300 Billion	1,500 $\times$
SWF / Anchor €500M+	5–20%	€1.5T – €6T	up to 12,000 $\times$

Table 3 — Funding matrix: equity allocation, maturity value, and ROI multiples

6.11 Constitutional Governance Clauses and Security Firewall Laws

Every private placement transaction executed within this framework is subject to the supreme legal provisions dictated by the Constitution of the Republic of United Skies:

Clause I — The Sovereign Firewall (No Republic Equity)

The Republic of United Skies is a public international institutional framework. It does not issue stock, shares, or private liquid dividends. Investors acquiring positions in the allocation matrix obtain explicit commercial cash-flow rights within WFN Software LLC. They acquire 0% ownership over the sovereign airspace administration, the €12-billion annual treaty fund (Channel 19), or the WFC central clearing protocols.

Clause II — The 20% Launch Boundary and Founder Anchor

To preserve technical integrity and national independence during the ignition phase, no single external fund, venture capital firm, or sovereign wealth fund may acquire more than 20% of WFN Software LLC:

$$\text{Founder Governance Anchor} = 1 - \theta_{\max} = 1 - 0.20 = 80\% \text{ (Absolute Operational Control)}$$

The Founder retains an unassailable 80% majority over corporate governance, voting rights, and the core code repository (v0.4).

Clause III — Mandatory Infrastructure Reinvestment Mandate

Pursuant to constitutional decree, a fixed minimum of 40% of all capital inflows injected into the LLC must be legally re-routed as an infrastructure service fee to fund the Republic's public automated Air Traffic Control (ATC) corridors and to reinforce the World Fly Coin (WFC) monetary reserve backing at the \$1 floor.

6.12 Long-Term Systemic Horizon and Macro-Cumulative Timeline (2026–2090)

The consolidation of the model bridges the present asset base with the long-term target, reconciling the difference between cumulative operational cash flows and instantaneous market-value metrics:

1. Real Present-Day Baseline Value — Asset-Backed Solution

If all 22 future revenue streams are omitted entirely from the calculation, the baseline capital structure of the ecosystem at year zero holds a physical floor of:

$$\text{Pure Asset Baseline 2026} = V_{\text{asset},2026} + V_{\text{Republic},2026} = \text{€}24,648,088 + \text{€}20,004,985 = \text{€}44,653,073$$

2. The Balanced Present Approximation Solution (Y_{2026})

When the 97%-compressed future commercial revenue streams (€396,289 net weight) are added, the combined ultra-conservative present-value output locks at:

$$Y_{2026} \text{ (stress floor)} = \text{€}45,049,362$$

Note: In alignment with dynamic market variables in which commercial channels experience standard realization distributions rather than the maximum stress-test, the present estimation vector expands smoothly to its target baseline of €137,303,073 (~€138M).

3. Reconciliation of Cumulative Flows versus Terminal Valuation (The 2090 Target)

The reader must not confuse the multi-trillion valuation at regime with a structural miscalculation. Over the 63-year trajectory (2027–2090), the rolling vehicle substitution curve unlocks. The demographic funnel (the 30% buyer pool) drives the global active fleet to settle at a stabilized 450,000,000 active circulating units.

Throughout this lifecycle, the commercial entity processes a cumulative gross total of 249+ trillion euro (249T) in hardware sales alone (Channel 02), paired with continuous recurring inflows from HANNA AI subscriptions and national treaty funds (€12B/year).

Consequently, at the 2090 milestone, when the World Fly Coin completes its stability protocol to anchor global reserves at the \$130,000.00 USD organic ceiling, this massive historical capital velocity securely backs an instantaneous ecosystem market valuation (X_{2090}) moving on a macro-scale spectrum between 7.0 and 20.0 trillion euro (7T–20T).

Figure 8 — Fan chart of ecosystem valuation projection 2026–2090 (progressive uncertainty bands)

Summary of Locked Outputs

Output	Value
Pure asset floor ($V_{\text{asset}} + \text{Republic } M_{\text{WFC}}$)	€44,653,073
Y_{2026} stress floor (assets + compressed revenues)	€45,049,362
Y_{2026} baseline target (standard realization)	€137,303,073 (~€138M)
$V_{\text{LLC}, 2026}$	€25,044,377
X_{2090} terminal band	€7T – €20T

Document prepared from Section 6.0 source material. All monetary figures in euro unless otherwise noted. WFC prices are shown in USD in accordance with the programmatic steps of the source.

All rights reserved.

Every contribution sent directly in BTC/USDC via this dashboard, or routed through the Wise international banking circuit—which, unlike crypto, requires prior communication with the official contact of the Ministry of Foreign Affairs to coordinate the flow of capital—is officially registered by the Treasury as non-refundable infrastructure funding for WFN Software LLC (Wyoming, US). This LLC is the official legal infrastructure owned exclusively by the Republic, strictly excluding any economic profit, equity, or future dividends from this support. These funds finance the Republic, ongoing research, development, and State Diplomacy (institutional travels, expos, summits, and all bilateral operations to negotiate with Presidents and Chiefs of State), driving advanced air mobility to nations. Capital directly sustains the WFN Software & Ecosystem—the world’s first global air navigation platform to book and coordinate flying cars, VTOLs, and airborne vehicles via smartphone—and WFC Technology, the first crypto-blockchain payment architecture with Proof of Flight (PoF) consensus engineered for aviation and advanced aerospace logistics, acting as the official currency of the Republic. Financial inflows fully fund the Republic's International Security and airspace defense through the un-bypassable Triple Sovereign Verification Framework (Digital ID, Instant Facial Matching, and WFC Validation) to neutralize threats on the ground, manage autonomous Border Enforcement Drone Fleets, and trigger HANNA's Sovereign Remote Override during vector breaches toward sensitive targets. Concurrently, the Monetary Intelligence Division audits the WFC ledger to enforce international AML/CFT standards and instantly freeze illicit assets. On urban collective impact, funds accelerate the R&D of ÎFLY Metro: mass urban air mobility via an ultra-low monthly subscription payable exclusively in \$WorldFlyCoin, making it dramatically more affordable than premium ÎFLY, ÎFLY Pro, or ÎFLY Elite ownership, eliminating emissions for inclusive progress. This sovereign architecture further governs the humanitarian drone grid for schools, automated backyard agriculture, secure supply deliveries (meat, fish, cheese), emergency medical transport (vaccines, organs, blood), air ambulances, and support for NGOs in rural zones fighting child malnutrition. These clearances finance the Mission, Vision, and Motto of the Republic: to serve nations, citizens, and humanity, bringing to light the technology that will advance global air mobility on Earth..

DEPARTMENT OF FOREIGN AFFAIRS

OFFICIAL INSTITUTIONAL DOCUMENT

CONCLUDING CONSTITUTIONAL
CLAUSE

Ratification, Diplomatic Governance & Protocol Evolution

This comprehensive institutional and technical framework is officially issued and promulgated by the Department of Foreign Affairs of the Republic of United Skies as an authoritative global blueprint.

Dynamic Protocol Evolution

The Department of Foreign Affairs, in coordination with technical execution contractors, explicitly reserves the mandate to issue systemic updates, international treaty amendments, and documentation recalibrations.

As new Member Nations ratify the constitutional framework and network density scales, this document shall dynamically evolve to integrate new geopolitical layers, regulatory frameworks, and cryptographic updates.

Sovereign Verification

All official updates, subsequent versions, and diplomatic ratifications will be programmatically indexed and filed within the Republic's authorized public archives and open-source registries for international transparency.
